About Me

Hello, I'm Krishna Tyagi, a passionate computer science student at ABES Institute of Technology in Ghaziabad. I've explored various domains, including web development, blockchain, and machine learning. Projects like Stock Market Price Prediction, Blockchain-based Certificate Generation, and several Convolutional Neural Networks reflect my dedication to innovation in technology. Additionally, I've worked with other notable web development projects, such as a Hospital Management Blog with a REST API, Chat-app.

Education

Abes Institute of Technology

Ghaziabad, U.P.
-> Bachelor of technology in Computer Science;
-> Relevant Coursework: Data Structures and Algorithms, Machine Learning, Database Systems, Software Engineering, Web Development, Object-Oriented Programming.

Dewan Public School

Hapur, U.P.
-> 10th in CBSE Board - 86%
-> 12th in CBSE board - 93%

Technical Skills

-> Programming Languages: Proficient in C, C++, Python; Familiar with JavaScript, Solidity, HTML/CSS.
-> Tools and Technologies: Git, Linux (Ubuntu), Database (MongoDB, My SQLite).
-> Frameworks: Django, Express.js, PyTorch, Scikit-Learn.

Experience

Participant, Hackathons

-> Actively participated in multiple hackathons, showcasing problem-solving skills and creativity.
-> Qualified for final round in Internal Hackathon @ ABESIT for SMART INDIA HACKATHON 2023.
-> Qualified for the final round in Hacknovate 4.0, demonstrating effective collaboration and rapid prototyping.

LeetCode Badges

-> January LeetCoding Challenge
-> 50 Days Badge 2024

Projects

-> Blockchain based Certificate Generation and Verification

Revolutionize certificate handling with our project! Using Ethereum blockchain, we secure certificates with Hardhat, ReactJS for a user-friendly interface, and IPFS servers for decentralized storage. This ensures tamper-proof certificates, instant verification and transparent traceable transactions.

Project Link

-> Stock Market Domain with Price Predictions

I've created a Stock Market Price Prediction website using Django, python and Nsetools API. With real-time market data, it employs a Linear Regression model from Scikit-learn for accurate predictions. The website offers a user-friendly interface with interactive visualizations using Matplotlib. Beyond predictions, it also showcase's comprehensive features of Indian stock market companies, providing insights for strategic investment decisions.

Project Link

-> URL Shortener using Django

This quick and secure URL shortener powered by Django. Instantly transform lengthy URLs into shareable links. Customize slugs, track analytics, and manage links effortlessly.

Project Link

-> Blockchain based Funding System

I've pioneered a revolutionary Blockchain-Based Funding System, utilizing Solidity, Hardhat, and Next.js. Smart contracts in Solidity ensure secure and transparent transactions, while Hardhat streamlines development. The Next.js frontend offers a user-friendly experience. This decentralized system eliminates intermediaries, supporting asset tokenization and providing an immutable transaction history. With integrated wallets and real-time analytics, my project transforms fundraising, fostering trust and efficiency in the process.

Project Link

-> Blog website with REST API

I've crafted a dynamic Blog Website with a robust REST API using Django and Django REST Framework. This platform offers seamless content creation and consumption. The combination of Django's simplicity and REST Framework's flexibility ensures a user-friendly experience. With features like authentication, data serialization, and endpoints, my project empowers users to effortlessly manage, create, and share content, elevating the blogging experience.

Project Link

-> Django Chat App

This is a simple chatting app where people can chat by joining any rooms or by creating new rooms and sharing those, Room IDs.
