About Me

Hello, I'm Krishna Tyagi, a passionate computer science student at ABES Institute of Technology in Ghaziabad. My journey in the realm of technology has led me to explore various domains, including web development, blockchain, and machine learning. I've crafted impactful projects like the Stock Market Price Prediction, Blockchain-based Certificate Generation and Verification System, and several Convolutional Neural Networks. Additionally, I've contributed to other notable web development projects, such as a Hospital Management Blog with a REST API. Excited about the ever-evolving world of technology, I am dedicated to pushing boundaries and creating innovative solutions.

Education

Abes Institute of Technology Ghaziabad, U.P.

-> Bachelors in technology in Computer Science

Relevant Coursework: Data Structures and Algorithms, Artificial Intelligence.

Dewan Public School **Hapur, U.P.**

-> 10th in CBSE Board -

-> 12th in CBSE board -

Technical Skills

-> Programming Languages: C, C++, Python, JavaScript, Solidity.

-> Technologies: Web Development with Django and MERN, Blockchain DAPPS with JavaScript, Machine Learning and Deep Learning with Python.

Projects

-> Blockchain based Certificate Generation and Verification

Revolutionize certificate handling with our project! Using Ethereum blockchain, we secure certificates with Hardhat, ReactJS for a user-friendly interface, and IPFS servers for decentralized storage. This ensures tamper-proof certificates, instant verification and transparent traceable transactions.

-> Stock Market Domain with Price Predictions

I've created a Stock Market Price Prediction website using Django, python and Nsetools API. With real-time market data, it employs a Linear Regression model from Scikit-learn for accurate predictions. The website offers a user-friendly interface with interactive visualizations using Matplotlib. Beyond predictions, it also showcase's comprehensive features of Indian stock market companies, providing insights for strategic investment decisions.

-> Blockchain based Funding System

I've pioneered a revolutionary Blockchain-Based Funding System, utilizing Solidity, Hardhat, and Next.js. Smart contracts in Solidity ensure secure and transparent transactions, while Hardhat streamlines development. The Next.js frontend offers a user-friendly experience. This decentralized system eliminates intermediaries, supporting asset tokenization and providing an immutable transaction history. With integrated wallets and real-time analytics, my project transforms fundraising, fostering trust and efficiency in the process.

-> Blog website with REST API

I've crafted a dynamic Blog Website with a robust REST API using Django and Django REST Framework. This platform offers seamless content creation and consumption. The combination of Django's simplicity and REST Framework's flexibility ensures a user-friendly experience. With features like authentication, data serialization, and endpoints, my project empowers users to effortlessly manage, create, and share content, elevating the blogging experience.
