Professional Summary

Backend Engineer with production experience building Java / Spring Boot systems across multi-tenant SaaS, distributed microservices, and event-driven enterprise platforms. Experienced in designing scalable backend architectures, RESTful APIs, asynchronous event-driven workflows, and performance-critical systems — including reducing API response times from 20s+ to under 2 seconds.

Experience

Vegazva Group

Dec 2025 – Present

Backend Developer

Gurugram, India

- Built and maintained backend services for an enterprise aftermarket B2B commerce platform on Spring Boot microservices handling 20,000+ daily API requests across multiple OEM tenants.
- Architected a multi-tenant HRMS and payroll platform from scratch as sole architect for the relational database schema, microservice boundaries, and RESTful API contracts.
- Designed and shipped a subscription-tier feature-gating system controlling pricing, checkout, and search visibility by plan entitlement, including a self-service admin API and an end-to-end quote-request workflow as a checkout alternative.
- Extended a custom RBAC layer enforcing per-endpoint authorization across roles atop Keycloak; root-caused and fixed a production-blocking Liquibase migration failure.
- Automated on-premises deployment stack (Spring Boot, React, Nginx, MySQL, Grafana, Apache Superset) via shell scripting, reducing provisioning time by 60%+.
- Designed OpenSearch-powered parts discovery delivering sub-1-second search latency across 10,000+ indexed records.
- Built order lifecycle modules (cancellation, returns, refunds), a bin-packing shipment optimization algorithm, and event-driven RabbitMQ workflows decoupling services under peak load.
- Built an internal observability layer tracking per-module API usage and login activity via async, non-blocking hit counters and a permission-driven trackable-endpoint registry, with scheduled retention-cleanup jobs to bound storage growth.
- Coordinated sprint planning, code reviews, and task allocation for the backend team following the engineering manager's departure.

Innobit Systems

Dec 2024 – Dec 2025

Member Technical Staff: Jun 2025 – Dec 2025

Greater Noida, India

Member Technical Staff Trainee: Dec 2024 – Jun 2025

- Built backend infrastructure for a multi-tenant SaaS e-commerce platform supporting 50+ merchants with tenant isolation and subdomain routing.
- Designed shipping infrastructure including UPS / TForce Freight integrations and a bin-packing optimization algorithm.
- Engineered transactional RESTful order lifecycle APIs for checkout, returns, partial returns, and refunds.
- Integrated PayPal subscriptions with webhook reconciliation, TaxJar, and IPQS fraud detection with response caching, cutting verification cost 30%+.
- Reduced API response times from 20s+ to under 2 seconds and resolved JVM heap exhaustion via thread dump analysis and query plan optimization.
- Migrated authentication to Keycloak OAuth2 reducing identity-related incidents by 25%.

Projects

Event-Driven E-Commerce Platform

- Built an event-driven microservices platform (Spring Boot, Apache Kafka, Redis, MySQL, Docker Compose) with database-per-service architecture and reliability patterns including Transactional Outbox, Kafka Retry/Dead Letter Topics (DLT), and idempotent consumers.
- Developed asynchronous order, inventory, and notification workflows with concurrency-safe inventory reservation, Redis cache-aside caching, API rate limiting, and failure-recovery simulation.
- Containerized Kafka, Redis, MySQL, and all microservices with Docker Compose for isolated local infrastructure orchestration.

Education

ABES Institute of Technology

Oct 2021 – Jun 2025

B.Tech Computer Science (AI Specialization)

Ghaziabad, India

Technical Skills

Languages: Java, Python, SQL, JavaScript, C++, Bash

Frameworks: Spring Boot, Spring Security, Hibernate, JPA, JUnit, Mockito, React, Next.js, Django

Architecture: Microservices, Distributed Systems, Event-Driven Architecture, Multi-tenant SaaS, REST APIs, System Design, Multithreading, Agile/Scrum

Databases/Caching: MySQL, PostgreSQL, Redis, Schema Design, Query Optimization, Indexing

Messaging/Search: Apache Kafka, RabbitMQ, OpenSearch

Security/DevOps: Keycloak, OAuth2, JWT, RBAC, Docker, Docker Compose, CI/CD, Liquibase, Nginx, AWS(S3, EC2, SES, ECR), Git, Gradle, Maven, Linux

Tools/Integrations: Apache Superset, PayPal, UPS, TForce Freight, TaxJar, IPQS
