Professional Summary

Backend Engineer with **proven production experience** building **Java / Spring Boot** systems across **multi-tenant SaaS, distributed microservices, and enterprise platforms**. Track record of designing systems from scratch and eliminating critical performance bottlenecks — including reducing API response times from **20s+ to under 2 seconds**.

Experience

Vegazva Group Dec 2025 – Present
Backend Developer Gurugram, India

- Built and maintained backend services for an **enterprise aftermarket commerce platform** on Spring Boot microservices handling **20,000+ daily API requests**.
- Architected a multi-tenant HRMS platform from scratch** — sole architect for the relational DB schema, service boundaries, and API contracts.
- Automated full **on-premises deployment stack** (Spring Boot, React, Nginx, MySQL, Grafana, Apache Superset) via shell scripts, reducing provisioning time by **60%+**.
- Designed **OpenSearch-powered parts discovery** delivering **sub-1-second search latency** across **10,000+ indexed records**.
- Integrated **Apache Superset** and built dashboards tracking user behavior, login patterns, and API activity across enterprise tenants.
- Built complete **order lifecycle modules** (cancel, partial cancel, return, partial return, refund) and a **bin-packing shipment optimization algorithm**, improving packaging efficiency and shipping overhead.
- Engineered **asynchronous workflows with RabbitMQ** to decouple services and prevent request blocking under peak load.
- Secured platform with **Keycloak RBAC** enforcing fine-grained authorization across tenants; managed schema evolution via **Liquibase**.

Innobit Systems Dec 2024 – Dec 2025
Member Technical Staff Greater Noida, India

Member Technical Staff Trainee: Dec 2024 – Jun 2025 (contributed to production codebase throughout)

- Built the backend for a **multi-tenant SaaS e-commerce platform** from scratch supporting **50+ merchants** with strict tenant isolation and subdomain routing.
- Designed full **shipping infrastructure**: bin-packing optimization algorithm and **UPS / TForce Freight** carrier integrations for automated rate selection and label generation.
- Engineered complete **order lifecycle APIs** — catalog, cart, checkout, return, partial return, partial cancel, and refund flows with transactional consistency.
- Integrated **PayPal** for order payments, refunds, and **full subscription lifecycle** (creation, upgrades, cancellations, webhook reconciliation); **TaxJar** for real-time tax calculation.
- Implemented **IPQS multi-level fraud detection** (IP, email, phone) with response caching, reducing redundant API calls and verification cost by **30%+**.
- Reduced critical **API response times from 20s+ to under 2 seconds**; resolved JVM heap exhaustion causing production restarts via thread dump analysis and query plan optimization.
- Migrated auth to **Keycloak OAuth2**, cutting identity-related incidents by **25%**.

PlatUI Jan 2024 – Apr 2024
Software Developer Intern Ghaziabad, India

- Built reusable **React components** across 10+ production interfaces and a **Python Flask middleware** processing **1,000+ daily API requests**, resolving async data flow issues across Java and Python services.

Education

ABES Institute of Technology Oct 2021 – Jun 2025
B.Tech Computer Science (AI Specialization) Ghaziabad, India

Technical Skills

Languages: Java, Python, SQL, JavaScript, C++

Frameworks: Spring Boot, Hibernate, JPA, JUnit, Mockito, React, Next.js, Django, Flask

Architecture: Microservices, Multi-tenant SaaS, Distributed Systems, REST APIs, System Design, Multithreading

Databases: MySQL, PostgreSQL, Schema Design, Query Optimization, Indexing

Search & Messaging: OpenSearch, RabbitMQ

Security: Keycloak, OAuth2, RBAC, Secure API Design

DevOps: Docker, AWS (S3), CI/CD, Liquibase, On-Prem Deployment Automation, Nginx, Grafana

Integrations: PayPal Subscriptions API, UPS, TForce Freight, TaxJar, IPQS, Apache Superset
