Professional Summary

Backend Engineer with production experience building Java / Spring Boot systems across multi-tenant SaaS, distributed microservices, and enterprise platforms. Experienced in designing scalable backend architectures, asynchronous event-driven workflows, and performance-critical systems including reducing API response times from 20s+ to under 2 seconds.

Experience

Vegazva Group

Dec 2025 – Present

Backend Developer

Gurugram, India

- Built and maintained backend services for an enterprise aftermarket commerce platform on Spring Boot microservices handling 20,000+ daily API requests.
- Architected a multi-tenant HRMS platform from scratch — sole architect for relational DB schema, service boundaries, and API contracts.
- Automated on-premises deployment stack (Spring Boot, React, Nginx, MySQL, Grafana, Apache Superset) reducing provisioning time by 60%+.
- Designed OpenSearch-powered parts discovery delivering sub-1-second search latency across 10,000+ indexed records.
- Built order lifecycle modules and a bin-packing shipment optimization algorithm improving packaging efficiency and shipping overhead.
- Engineered asynchronous workflows with RabbitMQ preventing request blocking under peak load.
- Secured platform with Keycloak RBAC and managed schema evolution via Liquibase.

Innokit Systems

Dec 2024 – Dec 2025

Member Technical Staff: Jun 2025 – Dec 2025

Greater Noida, India

Member Technical Staff Trainee: Dec 2024 – Jun 2025

- Built backend infrastructure for a multi-tenant SaaS e-commerce platform supporting 50+ merchants with tenant isolation and subdomain routing.
- Designed shipping infrastructure including UPS / TForce Freight integrations and a bin-packing optimization algorithm.
- Engineered transactional order lifecycle APIs for checkout, returns, refunds, and subscriptions.
- Integrated PayPal subscriptions, TaxJar, and IPQS fraud detection with response caching reducing verification cost by 30%+.
- Reduced API response times from 20s+ to under 2 seconds and resolved JVM heap exhaustion via thread dump analysis and query optimization.
- Migrated authentication to Keycloak OAuth2 reducing identity-related incidents by 25%.

PlatUI

Jan 2024 – Apr 2024

Software Developer Intern

Ghaziabad, India

- Built reusable React components and a Python Flask middleware processing 1,000+ daily API requests across Java and Python services.

Projects

Event-Driven E-Commerce Platform

- Built an event-driven microservices platform using Spring Boot, Apache Kafka, Redis, MySQL, and Docker Compose.
- Implemented Transactional Outbox Pattern, Kafka Retry Topics, Dead Letter Topics (DLT), and idempotent consumers.
- Designed database-per-service architecture with isolated User, Product, Inventory, Order, and Notification services.
- Developed asynchronous order, inventory, and notification workflows with concurrency-safe inventory reservation and failure recovery simulation.
- Implemented Redis cache-aside strategy, API rate limiting, and trending product tracking using Redis Sorted Sets.
- Containerized Kafka, Redis, MySQL, and all microservices with Docker Compose for isolated local infrastructure orchestration.

Education

ABES Institute of Technology

Oct 2021 – Jun 2025

B.Tech Computer Science (AI Specialization)

Ghaziabad, India

Technical Skills

Languages: Java, Python, SQL, JavaScript, C++, Bash

Frameworks: Spring Boot, Spring Security, Hibernate, JPA, JUnit, Mockito, React, Next.js, Django

Architecture: Microservices, Distributed Systems, Event-Driven Architecture, Multi-tenant SaaS, REST APIs, System Design, Multithreading

Databases/Caching: MySQL, PostgreSQL, Redis, Schema Design, Query Optimization, Indexing

Messaging/Search: Apache Kafka, RabbitMQ, OpenSearch

Security/DevOps: Keycloak, OAuth2, JWT, RBAC, Docker, Docker Compose, CI/CD, Liquibase, Nginx, AWS S3

Tools/Integrations: Apache Superset, PayPal, UPS, TForce Freight, TaxJar, IPQS
