Professional Summary

Backend Engineer specializing in Java and Spring Boot, with production experience building multi-tenant SaaS, distributed microservices, and event-driven systems. Architected a multi-tenant HRMS/payroll platform from scratch and built real-time MQTT pipelines, RabbitMQ workflows, and OpenSearch-powered search serving 10,000+ records at sub-second latency. Currently leading a 4-developer backend team across architecture, delivery, code quality, and client-facing technical discussions. Improved production API performance from 20s+ to under 2s.

Experience

Vegazva Engineering Private Limited

Dec 2025 – Present

Project Lead and Senior Backend Developer: Jul 2026 – Present

Gurugram, India

Backend Developer: Dec 2025 – Jun 2026

- Lead 4 backend developers for an enterprise B2B commerce platform serving **20,000+ daily API requests** across multiple OEM tenants; own sprint planning, architecture, code reviews, releases, and client-facing technical discussions.
- Sole architect of a multi-tenant HRMS and payroll platform built from scratch, defining the relational database schema, microservice boundaries, and RESTful API contracts.
- Designed and built an MQTT-based real-time sensor data system, including broker setup, secure client authentication, and backend integration for live data delivery to consumers.
- Extended a custom RBAC layer enforcing per-endpoint authorization across roles on top of Keycloak; root-caused and fixed a production-blocking Liquibase migration failure.
- Designed a subscription-tier feature-gating system controlling pricing, checkout, and search visibility by plan entitlement, with a self-service admin API and end-to-end quote-request workflow.
- Built an internal observability layer tracking per-module API usage and login activity via asynchronous, non-blocking hit counters, permission-driven endpoint tracking, and scheduled retention cleanup.
- Designed OpenSearch-powered parts discovery delivering sub-1-second search latency across **10,000+ indexed records**, and automated on-premises deployment of Spring Boot, React, Nginx, MySQL, Grafana, and Superset via shell scripting, reducing provisioning time by **60%+**.

Innokit Systems Private Limited

Dec 2024 – Dec 2025

Member Technical Staff: Jun 2025 – Dec 2025

Greater Noida, India

Member Technical Staff Trainee: Dec 2024 – Jun 2025

- Built backend infrastructure for a multi-tenant SaaS e-commerce platform supporting **50+ merchants**, with tenant isolation and subdomain-based routing.
- Engineered transactional order-lifecycle APIs for checkout, returns, partial returns, and refunds, including webhook-based reconciliation with payment providers.
- Integrated PayPal subscriptions, TaxJar tax calculation, and IPQS fraud detection with response caching, cutting third-party verification cost by **30%+**.
- Designed shipping infrastructure with UPS / TForce Freight integrations and a bin-packing shipment optimization algorithm.
- Diagnosed and resolved JVM heap exhaustion through thread-dump analysis and query-plan optimization, reducing API response times from **20s+ to under 2s**.
- Migrated authentication to Keycloak OAuth2, reducing identity-related incidents by **25%**.

Projects

Event-Driven E-Commerce Platform

- Built a Spring Boot event-driven microservices platform using Kafka, Redis, MySQL, and Docker with database-per-service architecture and Transactional Outbox.
- Implemented idempotent consumers, Kafka retries/DLT, concurrency-safe inventory reservation, cache-aside caching, API rate limiting, and failure-recovery simulations.

Education

ABES Institute of Technology

Oct 2021 – Jun 2025

B.Tech Computer Science (AI Specialization)

Ghaziabad, India

Technical Skills

Languages: Java, SQL, Python, JavaScript, Bash

Backend: Spring Boot, Spring Security, Hibernate, JPA, REST APIs, JUnit, Mockito

Architecture: Microservices, Distributed Systems, Event-Driven Architecture, Multi-Tenant SaaS, System Design, Multithreading

Databases/Caching: MySQL, PostgreSQL, Redis, Schema Design, Query Optimization, Indexing

Messaging/Search: Apache Kafka, RabbitMQ, MQTT, OpenSearch

Security/DevOps: Keycloak, OAuth2, JWT, RBAC, Docker, Docker Compose, CI/CD, Liquibase, Nginx, AWS (S3, EC2, SES, ECR), Linux

Tools/Integrations: Git, Gradle, Maven, Apache Superset, PayPal, UPS, TForce Freight, TaxJar, IPQS
